Introduction to the Module

In this module, you will work on basic math related to whole number arithmetic. Numeracy is important and is part of our complex world. Whether it is calculating a budget or paying bills, arithmetic skills are critical. Enjoy this module!

Important

When you see an object like the one below, you can either use the camera on your phone or tablet, or you can click on the link to play the video of the math example.

Specific Learning Outcomes

The table below displays the skills and knowledge that you will explore in this module. This is your opportunity to evaluate your own skills to see if you can do these things. At the end of this module, you will be invited to re-evaluate your skills to measure the progress you have made.

| In this module I will learn how to ... | I can't do this | I can do this with help | I can do this! |
|---|-----------------|-------------------------|----------------|
| 1. Multiply whole numbers | | | |
| 2. Divide whole numbers | | | |
| 3. Solve problems using multiplication and division | | | |

Essential Skills

The essential skills used in this module are the following:

Reading: Understanding materials written in sentences or paragraphs

Numeracy: Using and understanding numbers

Writing: Writing on paper or typing on a computer

Vocabulary: Gaining related vocabulary

Unit 1: Multiplication

Learning Objectives

- Identify the parts of a multiplication problem
- Know the multiplication table to nine
- Use the commutative property of multiplication
- Use the associative property of multiplication
- Multiply by single digit numbers
- Multiply larger numbers by a single-digit number
- Multiply larger numbers by a two-digit number

Keywords

| | |
|---------------------|--|
| Factors | Numbers you can multiply together to get another number. For example, $7 \times 4 = 28$ |
| Multiplicand | The <i>first number</i> in a multiplication equation. For example, $7 \times 4 = 28$ |
| Multiplier | The <i>second number</i> in a multiplication equation. For example, $7 \times 4 = 28$ |
| Product | The <i>answer</i> or <i>result</i> of a multiplication equation. For example, $7 \times 4 = 28$ |

Lesson 1.1: Multiplication Table Basic Facts

Introductory Video: Learning Your Multiplications Table

Want to watch a video of this lesson?

<https://youtu.be/v1Ih3-mDPUk>

Multiplication is the repeated addition of the same number.

For example, $8 + 8 + 8 + 8$ means we are adding 8 four times. This can be expressed in terms of multiplication: $4 \times 8 = 32$.

In the above example, the repeated number (8) and the number of times it is used (4) are both called factors. The numbers 8 and 4, the two numbers multiplied, are factors of 32. The result of the multiplication is called the product.

| | | | | |
|--------------------|---|--------------------|---|---------------------|
| 4 | × | 8 | = | 32 |
| ↕ | | ↕ | | ↕ |
| Fact or | × | Fact or | = | Produ ct |

Basic Multiplication Facts to Nine

Knowing your times table to nine makes doing math questions much quicker.

| × | 1 | 2 | 3 | 4 | 5 | 6 | 7 | 8 | 9 |
|---|---|----|----|----|----|----|----|----|----|
| 1 | 1 | 2 | 3 | 4 | 5 | 6 | 7 | 8 | 9 |
| 2 | 2 | 4 | 6 | 8 | 10 | 12 | 14 | 16 | 18 |
| 3 | 3 | 6 | 9 | 12 | 15 | 18 | 21 | 24 | 27 |
| 4 | 4 | 8 | 12 | 16 | 20 | 24 | 28 | 32 | 36 |
| 5 | 5 | 10 | 15 | 20 | 25 | 30 | 35 | 40 | 45 |
| 6 | 6 | 12 | 18 | 24 | 30 | 36 | 42 | 48 | 54 |
| 7 | 7 | 14 | 21 | 28 | 35 | 42 | 49 | 56 | 63 |
| 8 | 8 | 16 | 24 | 32 | 40 | 48 | 56 | 64 | 72 |
| 9 | 9 | 18 | 27 | 36 | 45 | 54 | 63 | 72 | 81 |

Practice Times Table

| × | 1 | 2 | 3 | 4 | 5 | 6 | 7 | 8 | 9 |
|---|---|---|---|---|---|---|---|---|---|
| 1 | | | | | | | | | |
| 2 | | | | | | | | | |
| 3 | | | | | | | | | |
| 4 | | | | | | | | | |
| 5 | | | | | | | | | |
| 6 | | | | | | | | | |
| 7 | | | | | | | | | |
| 8 | | | | | | | | | |
| 9 | | | | | | | | | |

Exercise 1.1

Multiplying One-Digit Numbers

Use your multiplication table to check your answers.

- | | | | | | | | | | |

Lesson 1.2: Multiplication Properties

Commutative Property

The product of two factors is always the same. We can multiply two numbers in any order and get the same result.

$$m \times n = n \times m$$

Example:

| | | | |
|------------------|---------------------|---|---|
| $2 \times 4 = 8$ | means 2 groups of 4 |  |  |
| $4 \times 2 = 8$ | means 4 groups of 2 |  |  |

Student Example 1

$$3 \times 4 =$$

Want to watch a video of this lesson?

<https://youtu.be/zwD1A9159F4>

Associative Property

The product of three factors is always the same. Again we can multiply numbers in any order.

$$(m \times n) \times r = m \times (n \times r)$$

Example:

$$\begin{aligned} 3 \times 2 \times 4 \\ 3 \times (2 \times 4) \\ 3 \times (8) \\ 24 \end{aligned}$$

$$\begin{aligned} 3 \times 2 \times 4 \\ (3 \times 2) \times 4 \\ (6) \times 4 \\ 24 \end{aligned}$$

Student Example 2

$$4 \times 5 \times 2 =$$

Want to watch a video of this lesson?

<https://youtu.be/Wqxfm7EPcjo>

Exercise 1.2

Multiplying Three Numbers

Note you can multiply the numbers in any order. You can look for two that you find easiest first and then multiply the product with the third number.

1. $2 \times 3 \times 1$

2. $2 \times 4 \times 3$

3. $3 \times 2 \times 4$

4. $2 \times 4 \times 5$

5. $3 \times 2 \times 5$

6. $4 \times 4 \times 5$

7. $3 \times 4 \times 5$

8. $3 \times 6 \times 5$

9. $9 \times 2 \times 2$

10. $2 \times 7 \times 3$

11. $6 \times 2 \times 5$

12. $7 \times 2 \times 5$

13. $2 \times 9 \times 5$

14. $8 \times 3 \times 5$

15. $6 \times 5 \times 5$

16. $2 \times 4 \times 7$

17. $9 \times 2 \times 4$

18. $3 \times 6 \times 4$

19. $6 \times 7 \times 5$

20. $8 \times 6 \times 5$

Lesson 1.3: Multiplying by 10, 100, and 1 000

There are shortcuts when multiplying by 10, 100, and 1 000.

- Add a zero when multiply by 10.
 $3 \times 10 = 30$
- Add two zeros when multiply by 100.
 $3 \times 100 = 300$
- Add three zeros when multiply by 1 000.
 $3 \times 1\,000 = 3\,000$

Study the following examples closely:

| Multiply | | |
|--------------------------|----------------------------|--------------------------------|
| By 10 | By 100 | By 1 000 |
| $3 \times 10 = 30$ | $3 \times 100 = 300$ | $3 \times 1\,000 = 3\,000$ |
| $84 \times 10 = 840$ | $84 \times 100 = 8\,400$ | $84 \times 1\,000 = 84\,000$ |
| $172 \times 10 = 1\,720$ | $172 \times 100 = 17\,200$ | $172 \times 1\,000 = 172\,000$ |

Student Examples

1. $4 \times 10 =$

Want to watch a video of this lesson?

<https://youtu.be/SG4gX-VGzog>

2. $2 \times 100 =$

3. $9 \times 1\,000 =$

Exercise 1.3

1. $2 \times 10 =$

2. $5 \times 100 =$

3. $8 \times 1\,000 =$

21. $9 \times 100 =$

22. $6 \times 1\,000 =$

23. $1 \times 100 =$

24. $5 \times 1\,000 =$

25. $7 \times 10 =$

26. $8 \times 100 =$

27. $4 \times 100 =$

28. $6 \times 1\,000 =$

29. $2 \times 1\,000 =$

30. $6 \times 100 =$

31. $3 \times 1\,000 =$

32. $9 \times 10 =$

Lesson 1.4: Multiplying by a One-Digit Number

Introductory Video:

Want to watch a video of this lesson?

<https://youtu.be/FJ5qLWP3Fqo>

Rules for Estimating

1. Round each number to the place of the **last digit on the left**.
2. Multiply the rounded numbers.

Multiplier is the name given to the number doing the multiplying. In the example below, the multiplier is 3. Estimate first.

Example: Multiply 52×3

| <i>Estimate</i> | <i>Actual</i> |
|---|---|
| $\begin{array}{r} 50 \\ \times 3 \\ \hline 150 \end{array}$ | $\begin{array}{r} 52 \\ \times 3 \\ \hline 156 \end{array}$ |

Student Example 1

Multiply: 3×60

Want to watch a video of this lesson?

<https://youtu.be/jb8mFpA1YI8>

Example 1 and 2

Student Example 2

Multiply: $50 \times 7 =$

Student Example 3

Multiply: $6 \times 37 =$

Want to watch a video of this lesson?

https://youtu.be/SfxULALs_u8

Exercise 1.4

Solve the following. Use front-end rounding for the estimates.

| | Estimate | Actual |
|------------------|---|---|
| 1. 24×3 | $\begin{array}{r} 20 \\ \times 3 \\ \hline \end{array}$ | $\begin{array}{r} 24 \\ \times 3 \\ \hline \end{array}$ |
| 2. 46×2 | | |
| 3. 17×4 | | |
| 4. 18×9 | | |
| 5. 14×5 | | |

| | Estimate | Actual |
|-------------------|----------|--------|
| 6. 32×6 | | |
| 7. 45×7 | | |
| 8. 33×8 | | |
| 9. 67×3 | | |
| 10. 78×6 | | |
| 11. 59×4 | | |
| 12. 72×5 | | |
| 13. 53×8 | | |

| | Estimate | Actual |
|--------------------|--|--|
| 14. 29×3 | | |
| 15. 38×6 | | |
| 16. 341×7 | $\begin{array}{r} 300 \\ \times 7 \\ \hline \end{array}$ | $\begin{array}{r} 341 \\ \times 7 \\ \hline \end{array}$ |
| 17. 576×8 | | |
| 18. 867×6 | | |
| 19. 333×5 | | |

| | Estimate | Actual |
|--------------------|----------|--------|
| 20. 230×4 | | |
| 21. 468×3 | | |
| 22. 748×2 | | |
| 23. 203×2 | | |
| 24. 405×5 | | |

| | Estimate | Actual |
|-----------------------|----------|--------|
| 25. 527×7 | | |
| 26. 748×9 | | |
| 27. 843×6 | | |
| 28. 699×8 | | |
| 29. $2\,804 \times 6$ | | |

| | Estimate | Actual |
|---------------|----------|--------|
| 30. 1 704 × 9 | | |

Lesson 1.5: Multiplying by a Two-Digit Multiplier

Introductory Video:

Want to watch a video of this lesson?

<https://youtu.be/RVYwunbpMHA>

Example:

Multiply: 29×34

Estimate *Actual*

$$\begin{array}{r} 30 \\ \times 30 \\ \hline 900 \end{array}$$

$$\begin{array}{r} 29 \\ \times 34 \\ \hline \end{array}$$

$$\begin{array}{r} 116 \\ \times 34 \\ \hline \end{array}$$

$$\begin{array}{r} 116 \\ \times 34 \\ \hline \end{array}$$

$$\begin{array}{r} 116 \\ \times 34 \\ \hline \end{array}$$

$$\begin{array}{r} 116 \\ \times 34 \\ \hline \end{array}$$

$$\begin{array}{r} 116 \\ \times 34 \\ \hline \end{array}$$

$$\begin{array}{r} 116 \\ \times 34 \\ \hline \end{array}$$

$$\begin{array}{r} 116 \\ \times 34 \\ \hline \end{array}$$

$$\begin{array}{r} 116 \\ \times 34 \\ \hline \end{array}$$

$$\begin{array}{r} 116 \\ \times 34 \\ \hline \end{array}$$

$$\begin{array}{r} 116 \\ \times 34 \\ \hline \end{array}$$

$$\begin{array}{r} 116 \\ \times 34 \\ \hline \end{array}$$

$$\begin{array}{r} 116 \\ \times 34 \\ \hline \end{array}$$

$$\begin{array}{r} 116 \\ \times 34 \\ \hline \end{array}$$

$$\begin{array}{r} 116 \\ \times 34 \\ \hline \end{array}$$

$$\begin{array}{r} 116 \\ \times 34 \\ \hline \end{array}$$

$$\begin{array}{r} 116 \\ \times 34 \\ \hline \end{array}$$

$$\begin{array}{r} 116 \\ \times 34 \\ \hline \end{array}$$

$$\begin{array}{r} 116 \\ \times 34 \\ \hline \end{array}$$

$$\begin{array}{r} 116 \\ \times 34 \\ \hline \end{array}$$

$$\begin{array}{r} 116 \\ \times 34 \\ \hline \end{array}$$

$$\begin{array}{r} 116 \\ \times 34 \\ \hline \end{array}$$

$$\begin{array}{r} 116 \\ \times 34 \\ \hline \end{array}$$

$$\begin{array}{r} 116 \\ \times 34 \\ \hline \end{array}$$

Multiply $4 \times 9 = 36$. Put the 6 under the 4 and carry the 3.

Multiply the $4 \times 2 = 8$ and add the 3 equals 11.

Then put a 0 under the 6 as you are now multiplying by 30.

Multiply $3 \times 9 = 27$. Put the 7 under the 9 and carry the 2.

Multiply $3 \times 2 = 6$ and add the 2 equal 8.

Now add the two numbers: $116 + 870 = 986$

Student Example 1

Estimate the product: 42×29

Want to watch a video of this lesson?

<https://youtu.be/tx2Niw7aJJ8>

Student Example 2

Estimate the product: $8\,291 \times 27$

Want to watch a video of this lesson?

<https://youtu.be/K0Nqpf7Dcrc>

Student Example 3

Multiply: 36×27

Want to watch a video of this lesson?

<https://youtu.be/DaQlieZH1kk>

Student Example 4

Multiply: 324×46

Want to watch a video of this lesson?

| 16. 374×83 | | |
| 17. 543×78 | | |

| | Estimate | Actual |
|--------------|----------|--------|
| 18. 692 × 65 | | |

19. A car can travel 14 kilometres on 1 litre of gas. If the car's gas tank holds 45 litres, how far could this car travel on a full tank?

20. A can of pop holds 355 millilitres. How many millilitres of pop are there in a flat of 24 cans?

Unit 2: Division

Learning Objectives

- Identify parts of a division problem
- Write division in three different ways
- Divide with a single-digit divisor
- Divide with a two digit divisor

Keywords

| | |
|------------------|---|
| Dividend | The <i>first number</i> in a division equation. For example, $30 \div 4 = 7$ remainder 2 |
| Divisor | The <i>second number</i> in a division equation. For example, $30 \div 4 = 7$ remainder 2 |
| Quotient | The <i>answer</i> or <i>result</i> of the division. For example, $30 \div 4 = 7$ remainder 2 |
| Remainder | The amount left over when the division of two numbers does not work out to an even whole number. For example, $30 \div 4 = 7 \text{ r}2$ |
| Undefined | When a number is divided by 0, the result is called <i>undefined</i> . Undefined means the equation does not have meaning. For example, $30 \div 0 = \text{undefined}$ |

Lesson 2.1: Division Facts

Division is the opposite of multiplication.

If you know your times table to nine then you can use that to learn your division facts.

Examples:

$$8 \div 4$$

we can think $4 \times ? = 8$

$$4 \times 2 = 8 \text{ so } 8 \div 4 = 2$$

$$72 \div 8$$

we can think $8 \times ? = 72$

$$8 \times 9 = 72 \text{ so } 72 \div 8 = 9$$

Exercise 2.1

Division Practice – No Remainders

Complete all of the questions you know by heart. Then go back and use your multiplication table to complete the rest.

- | | | | | |
|-----------------------|-----------------------|-----------------------|-----------------------|-----------------------|
| 1. $9\overline{)36}$ | 2. $6\overline{)48}$ | 3. $3\overline{)15}$ | 4. $7\overline{)35}$ | 5. $8\overline{)56}$ |
| 6. $4\overline{)28}$ | 7. $2\overline{)8}$ | 8. $5\overline{)20}$ | 9. $3\overline{)27}$ | 10. $6\overline{)36}$ |
| 11. $7\overline{)63}$ | 12. $8\overline{)16}$ | 13. $9\overline{)45}$ | 14. $2\overline{)18}$ | 15. $5\overline{)25}$ |
| 16. $9\overline{)27}$ | 17. $6\overline{)18}$ | 18. $9\overline{)81}$ | 19. $7\overline{)14}$ | 20. $6\overline{)42}$ |
| 21. $9\overline{)54}$ | 22. $4\overline{)32}$ | 23. $3\overline{)9}$ | 24. $8\overline{)40}$ | 25. $7\overline{)56}$ |
| 26. $7\overline{)21}$ | 27. $3\overline{)18}$ | 28. $4\overline{)16}$ | 29. $8\overline{)72}$ | 30. $4\overline{)20}$ |
| 31. $6\overline{)42}$ | 32. $5\overline{)15}$ | 33. $3\overline{)24}$ | 34. $5\overline{)35}$ | 35. $7\overline{)49}$ |
| 36. $2\overline{)12}$ | 37. $3\overline{)21}$ | 38. $8\overline{)64}$ | 39. $4\overline{)24}$ | 40. $7\overline{)42}$ |
| 41. $4\overline{)36}$ | 42. $8\overline{)48}$ | 43. $6\overline{)30}$ | 44. $3\overline{)12}$ | 45. $5\overline{)45}$ |
| 46. $9\overline{)18}$ | 47. $5\overline{)40}$ | 48. $8\overline{)24}$ | 49. $8\overline{)40}$ | 50. $7\overline{)28}$ |

Lesson 2.2: Division by One-Digit Divisors

Introductory Video:

Want to watch a video of this lesson?

<https://youtu.be/KGMf314LUc0>

Division questions can be written in three ways:

$$12 \div 4 = 3 \quad \text{or} \quad \frac{12}{4} = 3 \quad \text{or} \quad \begin{array}{r} 3 \\ 4 \overline{)12} \end{array}$$

Quotient
Dividend

Divisor

In the examples above, the number being divided is called the **dividend**, the number doing the dividing is called the **divisor**, and the result of the division is called the **quotient**.

Of the three examples that follow, the first shows the repeated subtraction method of dividing. Examples 2 and 3 illustrate the method we will use in this module.

| | |
|------------------|---|
| Example 1 | What is $14 \div 4$? |
| Solution 1 | <div style="display: flex; align-items: flex-start;"> <div style="margin-right: 20px;"> $\begin{array}{r} 14 \\ - 4 \\ \hline 10 \end{array}$ </div> <div style="margin-right: 20px;"> $\begin{array}{r} 10 \\ - 4 \\ \hline 6 \end{array}$ </div> <div style="margin-right: 20px;"> $\begin{array}{r} 6 \\ - 4 \\ \hline 2 \end{array}$ </div> <div> <p>We subtract 4 repeatedly until the number left (the remainder) is less than 4.</p> </div> </div> <p>$14 \div 4 = 3$ remainder 2</p> |
| Example 2 | What is 14 divided by 4? |
| Solution 2 | <div style="display: flex; align-items: flex-start;"> <div style="margin-right: 20px;"> $\begin{array}{r} 3 \\ 4 \overline{)14} \\ \underline{12} \\ 2 \end{array}$ </div> <div> <p>Step 1: $14 \div 4 = 3$</p> <p>Step 2: $3 \times 4 = 12$</p> <p>Step 3: $14 - 12 = 2$</p> </div> </div> <div style="border: 1px solid black; padding: 10px; margin-top: 10px;"> <ul style="list-style-type: none"> • The 3 goes above the 4 as that is the last digit that is being divided. • The 12 goes under the 14 and is subtracted from 14. The difference is 2. </div> <p>$14 \div 4 = 3$ remainder 2</p> |

| | | |
|------------------|---|--|
| Example 3 | Connor is supposed to buy slurpees for all the kids at daycare. He has \$150, and slurpees cost \$2 each. How many slurpees can he buy? | |
| Solution 3 | $\begin{array}{r} 075 \\ 2 \overline{)150} \\ \underline{14} \\ 10 \\ \underline{10} \\ 0 \end{array}$ <p>Step 1: $15 \div 2 = 7$ Step 2: $7 \times 2 = 14$ Step 3: $15 - 14 = 1$ Step 4: Bring down the zero Step 5: $10 \div 2 = 5$ Step 6: $10 - 10 = 0$</p> | <ul style="list-style-type: none"> The 0 in front of the 7 is not necessary, as 2 doesn't go into 1, it is there as a placeholder only. |
| | $150 \div 2 = 75$ | |

Rules for Whole Number Division

- Start with one digit – the one on the far left of the dividend.
- How many times does the divisor go into that digit? Write the answer up top.
- Multiply that answer by the divisor; put the result under the current digit in the dividend.
- Subtract.
- Bring down one more digit from the dividend, and start again. Continue in this manner until there are no more digits to bring down—the division is now finished.

Student Example 1

Divide: $96 \div 4$

Want to watch a video of this lesson?

<https://youtu.be/KFzCWWTEDDI>

Student Example 2

Divide: $23 \div 3$

Want to watch a video of this lesson?

<https://youtu.be/8Ft5iHhauJO>

Watch video from 3:00

Student Example 3

Divide: $2\,292 \div 4$

Want to watch a video of this lesson?

<https://youtu.be/NcADzGz3bSI>

Video for examples 3 and 4

Student Example 4

Divide: $6\,475 \div 7$

Exercise 2.2

Solve the following.

1. $15 \div 4$

2. $20 \div 7$

3. $24 \div 5$

4. $42 \div 8$

5. $64 \div 9$

6. $50 \div 6$

7. $51 \div 4$

8. $46 \div 5$

9. $93 \div 6$

10. $96 \div 5$

11. $41 \div 3$

12. $59 \div 4$

13. $21 \div 2$

14. $32 \div 3$

15. $164 \div 3$

16. $112 \div 5$

17. $152 \div 6$

18. $130 \div 7$

19. $281 \div 9$

20. $661 \div 8$

21. $525 \div 7$

22.
$$\begin{array}{r} 455 \\ 5 \end{array}$$

23.
$$\begin{array}{r} 466 \\ 8 \end{array}$$

24.
$$\begin{array}{r} 219 \\ 9 \end{array}$$

25. $3\,019 \div 7$

26.
$$\begin{array}{r} 1\,725 \\ 2 \end{array}$$

27. $2\,906 \div 5$

28. $3\,848 \div 8$

29. $2\,168 \div 4$

30.
$$\begin{array}{r} 5\,949 \\ 6 \end{array}$$

31. Jenny can drive 624 kilometres in 8 hours. How far can she go in one hour?

Lesson 2.3: Division of Whole Numbers Involving Zeros

Introductory Video:

Want to watch a video of this lesson?

<https://youtu.be/9g61DHPJ6zY>

Once you start dividing every digit in the dividend must have a digit above in the quotient.

Example

Divide 812 by 2

Solution

$$\begin{array}{r} 406 \\ 2 \overline{) 812} \\ \underline{-8} \\ 012 \\ \underline{-12} \\ 0 \end{array}$$

Start: 8 divided by 2 is 4.

$$8 - 8 = 0$$

Bring down the 1.

2 doesn't go into 1 so put a zero above the 1 in the quotient.

Bring down the 2. Now 2 goes into 12, 6 times.

$$12 - 12 = 0$$

There is no remainder

The quotient is 406.

Student Example 1

$$4 \overline{) 832}$$

Want to watch a video of this lesson?

<https://youtu.be/c1f3z8UEpjE>

Video for examples 1 and 2

Student Example 2

$$3 \overline{) 903}$$

Student Example 3

Estimate the quotient: $7 \overline{)286}$

Want to watch a video of this lesson?

<https://youtu.be/YLQBYDvVhIo>

Video for examples 3 and 4

Student Example 4

Estimate the quotient: $5 \overline{)3427}$

Exercise 2.3

Estimate the quotient then solve to find the actual answer.

| | Estimate | Actual |
|-------------------|---------------------|---------------------|
| 1. $906 \div 3 =$ | $3 \overline{)900}$ | $3 \overline{)906}$ |

| | Estimate | Actual |
|-------------------|---------------------|---------------------|
| 2. $550 \div 5 =$ | | |
| 3. $613 \div 3 =$ | | |
| 4. $615 \div 2 =$ | $2 \overline{)600}$ | $2 \overline{)615}$ |
| 5. $834 \div 4 =$ | | |

| | Estimate | Actual |
|----------------------|------------------------|------------------------|
| 6. $761 \div 7 =$ | | |
| 7. $4\,680 \div 9 =$ | $9 \overline{)4\,500}$ | $9 \overline{)4\,680}$ |
| 8. $4\,906 \div 7 =$ | | |
| 9. $4\,832 \div 8 =$ | | |

| | Estimate | Actual |
|-----------------------|----------|--------|
| 10. $9\,138 \div 7 =$ | | |
| 11. $8\,427 \div 6 =$ | | |
| 12. $3\,047 \div 5 =$ | | |
| 13. $8\,008 \div 4 =$ | | |

| | Estimate | Actual |
|-----------------------|----------|--------|
| 14. $1\,922 \div 3 =$ | | |
| 15. $3\,524 \div 5 =$ | | |
| 16. $9\,060 \div 3 =$ | | |
| 17. $7\,270 \div 9 =$ | | |

| | Estimate | Actual |
|------------------------|-------------------------|-------------------------|
| 18. $29\,608 \div 4 =$ | $4 \overline{)28\,500}$ | $4 \overline{)29\,608}$ |
| 19. $54\,544 \div 6 =$ | | |
| 20. $28\,215 \div 7 =$ | | |

Lesson 2.4: Estimation and Division with Two-Digit Divisors

The procedure when dividing with two-digit divisors is the same as that presented in the previous section. In general, the steps are as follows:

- **Step 1:** Divide to find the first digit of the quotient.
- **Step 2:** Multiply the first digit of the quotient by the divisor.
- **Step 3:** Subtract the product from the first two digits of the dividend.
- **Step 4:** Bring down the next digit in the dividend.

Next, repeat steps 1 to 4 until the remainder is less than the divisor.

Study the following example that illustrates the division process.

| | |
|------------------|---|
| Example 1 | Estimate the quotient when 683 is divided by 51. |
| Solution 1 | $\begin{array}{r} 10 \\ 51 \overline{) 500} \end{array}$ <p>Round the divisor using front end rounding. Round the dividend to a compatible number (a number the rounded divisor will go into evenly)</p> <p>Step 1: 51 rounds to 50. Round the dividend, 683, to 500.</p> <p>Step 2: $500 \div 50 =$ Cancel a zero from both numbers</p> <p>Step 3: $50 \div 5 = 10$</p> <p>$683 \div 51$ is about 10.</p> |
| Example 2 | Find the quotient when 683 is divided by 51. |
| Solution 2 | $\begin{array}{r} 13 \\ 51 \overline{) 683} \\ \underline{51} \\ 173 \\ \underline{153} \\ 20 \end{array}$ <p>How many times will 51 divide into 6? None, so use 68.</p> <p>Step 1: $68 \div 51 = 1$</p> <p>Step 2: $1 \times 51 = 51$</p> <p>Step 3: $68 - 51 = 17$</p> <p>Step 4: Bring down the 3</p> <p>Now repeat steps 1 to 4 beginning with $173 \div 51$</p> <p>The quotient is 13 r20.</p> |

Student Example 1

Estimate the quotient: $54 \overline{)331}$

Want to watch a video of this lesson?

<https://youtu.be/ejD0ZXf17UQ>

Video for examples 1 and 2

Student Example 2

Estimate the quotient: $81 \overline{)7481}$

Student Example 3

Divide: $768 \div 32$

Want to watch a video of this lesson?

<https://youtu.be/eIUoIhfu puA>

Student Example 4

Divide: $7182 \div 42$

Want to watch a video of this lesson?

<https://youtu.be/xXIG8ouHcsc>

Exercise 2.4

Estimate then find the actual answer.

| | Estimate | Actual |
|--------------------|----------------------|----------------------|
| 1. $78 \div 13 =$ | $10 \overline{)80}$ | $13 \overline{)78}$ |
| 2. $\frac{85}{17}$ | $20 \overline{)80}$ | $17 \overline{)85}$ |
| 3. $264 \div 51$ | $50 \overline{)250}$ | $51 \overline{)264}$ |

| | Estimate | Actual |
|------------------|----------|--------|
| 4. $672 \div 24$ | | |
| 5. $187 \div 11$ | | |
| 6. $330 \div 14$ | | |
| 7. $806 \div 62$ | | |

| | Estimate | Actual |
|-------------------|----------|--------|
| 8. $576 \div 23$ | | |
| 9. $768 \div 24$ | | |
| 10. $903 \div 21$ | | |
| 11. $293 \div 32$ | | |

| | Estimate | Actual |
|-------------------|----------|--------|
| 12. $378 \div 63$ | | |
| 13. $694 \div 71$ | | |
| 14. $387 \div 54$ | | |
| 15. $654 \div 44$ | | |

| | Estimate | Actual |
|----------------------|--------------------------|--------------------------|
| 16. $415 \div 62$ | | |
| 17. $786 \div 24$ | | |
| 18. $849 \div 82$ | | |
| 19. $3\,186 \div 74$ | $70 \overline{) 2\,800}$ | $74 \overline{) 3\,186}$ |

| | Estimate | Actual |
|----------------------|----------|--------|
| 20. $2\,406 \div 36$ | | |
| 21. $2\,646 \div 33$ | | |
| 22. $4\,758 \div 64$ | | |
| 23. $3\,999 \div 72$ | | |

| | Estimate | Actual |
|----------------------|----------|--------|
| 24. $4\,411 \div 93$ | | |
| 25. $2\,797 \div 58$ | | |
| 26. $3\,606 \div 48$ | | |
| 27. $7\,070 \div 15$ | | |

| | Estimate | Actual |
|-----------------------|--------------------------|--------------------------|
| 28. $6\,527 \div 25$ | | |
| 29. $57\,033 \div 49$ | $50 \overline{)50\,000}$ | $49 \overline{)57\,033}$ |
| 30. $54\,636 \div 12$ | | |

31. Jenna buys a used car from the local car dealer for \$7 560. She wants to pay it off in 2 years by making 24 equal monthly payments. How much will she pay each month?

Lesson 2.5: Multiplication and Division Word Problems

Learning Objectives

- Use keywords and multiplication/division strategies to solve application problems

Key Words

| Multiplication | Division | Equals |
|----------------|-----------------|-------------|
| product | divided by | is |
| double | divided into | the same as |
| triple | quotient | equals |
| times | goes into | equals to |
| of | divide | yields |
| twice | divided equally | results in |
| twice as much | per | are |

Keep in mind that questions will sometimes *not* use the words above, but will *imply* that you need to find a total.

Think about...

When facing word problems, not only notice keywords in the question, but also look at what is happening in the “story” part of the problem. Do you already have a total number of something?

Be careful of extra information that is not needed to answer the question, and always be prepared for problems that involve more than one step.

Steps for Problem Solving

1. Read the problem carefully to ensure that you understand what is being asked.
2. Decide what to do to solve the problem.
3. Write a number sentence to show how you would arrive at the answer, then do the calculations.
4. Estimate by front end rounding, as this will assist you to determine if the answer will be reasonable or not. If the answer is reasonable move to number 5, if not estimate using a different operation.
5. Solve the equation.

6. Write the final answer in a clear, concise sentence using the appropriate units.

Study the following examples:

Example 1:

A certain river in Argentina is four times longer than a river in Brazil. The river in Brazil is 765 km long. How long is the river in Argentina?

Solution:

| Number sentence | Estimate | Calculation | Answer in sentence form |
|-----------------|---|---|--|
| 765×4 | $\begin{array}{r} 800 \\ \times 4 \\ \hline 3\,200 \end{array}$ | $\begin{array}{r} 765 \\ \times 4 \\ \hline 3\,060 \end{array}$ | The river in Argentina is about 3 060 km long. |

Example 2:

Sandra earns \$47 000 each year. How much, in total, will she earn in 5 years?

Solution:

| Number sentence | Estimate | Calculation | Answer in sentence form |
|--------------------|---|---|---|
| $47\,000 \times 5$ | $\begin{array}{r} 50\,000 \\ \times 5 \\ \hline 250\,000 \end{array}$ | $\begin{array}{r} 47\,000 \\ \times 5 \\ \hline 235\,000 \end{array}$ | Sandra will earn \$235 000 in five years. |

Example 3:

Alpana buys a new television set for \$1 200. She will pay for it in 10 equal payments. How much will each payment be?

Solution:

| Number sentence | Estimate | Calculation | Answer in sentence form |
|------------------|---|---|-----------------------------|
| $1\,200 \div 10$ | $\begin{array}{r} 100 \\ 10 \overline{)1\,000} \end{array}$ | $\begin{array}{r} 120 \\ 10 \overline{)1\,200} \end{array}$ | Each payment will be \$120. |

Example 4:

A bakery shop made 270 cookies. It sells the cookies in packages. Each package has 6 cookies. How many packages of cookies does the bakery have for sale?

Solution:

In this estimate you want to find a number that 6 goes into evenly.

| Number sentence | Estimate | Calculation | Answer in sentence form |
|-----------------|--|--|---|
| $270 \div 6$ | $\begin{array}{r} 50 \\ 6 \overline{)300} \end{array}$ | $\begin{array}{r} 45 \\ 6 \overline{)270} \end{array}$ | The bakery has 45 packages of cookies for sale. |

Student Example 1

Toby plants 12 rows of carrots in a field. He plants 6 carrots in each row. How many carrots did he plant?

Want to watch a video of this lesson?

https://youtu.be/fZtUn_THXnk

Student Example 2

Blair scored 144 point in field goals this season. He scored all of his points kicking 50 yard field goals each worth 3 points. He played in 16 games this season. How many field goals did Blair make per game assuming that he made the same amount of field goals each game?

Want to watch a video of this lesson?

<https://youtu.be/anlOhNHlqwg>

Exercise 2.5

Solve the following word problems. Remember to write a statement.

1. Chris made \$53 at his part time job every day for 3 weeks (21 days). How much money did he make in the three weeks?
2. Eight co-workers shared a lottery ticket that just won \$30 192. If they split the money evenly, how much does each person get?
3. Andrew earns \$32 per hour. How much will he earn if he works 76 hours over the next two weeks?
4. Xu worked 36 hours and received \$648 pay. What is her hourly wage?
5. A can of pop contains 355 millilitres of pop. How many millilitres will there be in 48 cans?

6. If a box contains 48 envelopes, how many envelopes would there be in 26 boxes?

7. A salesman traveled 2 075 kilometres in 5 days. If he drove the same distance each day, then how many kilometres did he travel each day?

8. At a town hall meeting, there are 6 people who want to speak. The meeting is 88 minutes long. If you give all 6 people equal time, how much time will each speaker get? Will there be any time left over?

9. A passenger aircraft is flying at a speed of 670 km/hr (kilometres per hour). At this rate of speed, how many kilometers will the plane travel in 12 hours?

10. Jeremy walked 837 km in 27 days. Assuming he walked the same distance each day, then how many km did he walk each day?

Lesson 2.6: More Complex Problems

| Addition | Subtraction | Multiplication | Division | Equals |
|--|---|--|--|--|
| plus more more than added to increased by sum total sum of increase of gain of | less subtract subtracted from difference less than fewer decreased by loss of minus take away | product double triple times of twice twice as much | divided by divided into quotient goes into divide divided equally per | is the same as equals equals to yields results in are |

Student Example

Abe went running 4 days this week. He ran 9 kilometres each day. Beth ran 15 fewer kilometres than Abe that week. How many kilometres did Beth run?

Want to watch a video of this lesson?

https://youtu.be/HL1wuw_k984

Exercise 2.6

1. Isabell has volunteered to bake desserts for her school bake sale. She baked 1 dozen (12) brownies and will sell them for \$4 each. She also baked two dozen cupcakes and plans to sell them for \$5 each. How much money will Mary raise if she sells all of her baked goods?
2. A group of six foreign language students plans a summer trip to Germany. The total cost of all six flights is \$8 400. Each person will also pay \$600 for the hotel. If all six students pay the same amount for the flight, what is the cost of the entire trip for each student, including the cost of the hotel?
3. A theatre in Edmonton holds 1 000 people. If the main floor has 24 rows of 30 seats each and the balcony has 14 rows. How many seats must be in each row in the balcony?

4. Brian and Tracy are saving money to split evenly between their three kids. If Brian saves \$420 and Tracy saves \$342, how much money will each child receive?

5. Glen and his wife and two other couples go for dinner which cost \$175, they went to the movie which cost \$14 per person and paid \$26 dollars to park. If the couples split the cost evenly, how much does each couple have to pay?

6. In the month of June, the Anderson family made four deposits of \$1 782 each to their bank account. They also withdrew \$5 931 for expenses. What was the account balance for the month of June, assuming they had nothing in the account at the start of the month?

Glossary for this Module

| | |
|---------------------|---|
| Dividend | The <i>first number</i> in a division equation. For example, 30 \div 4 = 7 remainder 2 |
| Divisor | The <i>second number</i> in a division equation. For example, 30 \div 4 = 7 remainder 2 |
| Factors | Numbers you can multiply together to get another number. For example, 7 \times 4 = 28 |
| Multiplicand | The <i>first number</i> in a multiplication equation. For example, 7 \times 4 = 28 |
| Multiplier | The <i>second number</i> in a multiplication equation. For example, 7 \times 4 = 28 |
| Product | The <i>answer</i> or <i>result</i> of a multiplication equation. For example, 7 \times 4 = 28 |
| Quotient | The <i>answer</i> or <i>result</i> of the division. For example, 30 \div 4 = 7 remainder 2 |
| Remainder | The amount left over when the division of two numbers does not work out to an even whole number. For example, 30 \div 4 = 7 r2 |
| Undefined | When a number is divided by 0, the result is called <i>undefined</i> . Undefined means the equation does not have meaning. For example, 30 \div 0 = undefined |

Answer Key

Unit 1

Exercise 1.1

| | | | | |
|--------|--------|--------|--------|---------|
| 1. 15 | 2. 24 | 3. 10 | 4. 54 | 5. 63 |
| 6. 12 | 7. 42 | 8. 18 | 9. 1 | 10. 0 |
| 11. 63 | 12. 42 | 13. 12 | 14. 40 | 15. 161 |
| 16. 24 | 17. 40 | 18. 81 | 19. 18 | 20. 15 |
| 21. 16 | 22. 18 | 23. 49 | 24. 27 | 25. 24 |
| 26. 15 | 27. 48 | 28. 30 | 29. 35 | 30. 32 |
| 31. 32 | 32. 56 | 33. 54 | 34. 28 | 35. 45 |
| 36. 32 | 37. 63 | 38. 15 | 39. 18 | 40. 4 |
| 41. 28 | 42. 9 | 43. 14 | 44. 72 | 45. 48 |
| 46. 72 | 47. 56 | 48. 20 | 49. 14 | 50. 10 |
| 51. 42 | 52. 8 | 53. 30 | 54. 6 | 55. 21 |
| 56. 63 | 57. 36 | 58. 64 | 59. 36 | 60. 10 |

| 13. | 400 | 424 | | 14. | 90 | 87 |
| 15. | 240 | 228 | | 16. | 2 100 | 2 387 |
| 17. | 4 800 | 4 608 | | 18. | 5 400 | 5 202 |
| 19. | 1 500 | 1 665 | | 20. | 800 | 920 |
| 21. | 1 500 | 1 404 | | 22. | 1 400 | 1 496 |
| 23. | 400 | 406 | | 24. | 2 000 | 2 025 |
| 25. | 3 500 | 3 689 | | 26. | 6 300 | 6 732 |
| 27. | 4 800 | 5058 | | 28. | 5 600 | 5 592 |

| | Estimate | Actual | | | Estimate | Actual |
|-----|----------|--------|--|-----|----------|--------|
| 29. | 18 000 | 16 824 | | 30. | 18 000 | 15 336 |

Exercise 1.5

| | Estimate | Actual | | | Estimate | Actual |
|-----|----------|--------|--|-----|----------|--------|
| 1. | 800 | 874 | | 2. | 2 000 | 2 106 |
| 3. | 400 | 352 | | 4. | 1 200 | 900 |
| 5. | 3 200 | 3300 | | 6. | 1 500 | 1 537 |
| 7. | 3 000 | 2 907 | | 8. | 1 800 | 1 728 |
| 9. | 3 200 | 3 071 | | 10. | 3 600 | 3 312 |
| 11. | 1 500 | 1 598 | | 12. | 2 400 | 2 030 |
| 13. | 12 000 | 11 544 | | 14. | 12 000 | 12 825 |
| 15. | 2 000 | 2 460 | | 16. | 32 000 | 31 042 |
| 17. | 40 000 | 42 354 | | 18. | 49 000 | 44 980 |

19. The car can travel 630 kilometres on a full tank of gas.

20. There are 8 520 millilitres in 24 cans of pop.

Unit 2

Exercise 2.1

| | | | | |
|-------|-------|-------|-------|-------|
| 1. 4 | 2. 8 | 3. 5 | 4. 5 | 5. 7 |
| 6. 7 | 7. 4 | 8. 4 | 9. 9 | 10. 6 |
| 11. 9 | 12. 2 | 13. 5 | 14. 9 | 15. 5 |
| 16. 3 | 17. 3 | 18. 9 | 19. 2 | 20. 7 |
| 21. 6 | 22. 8 | 23. 3 | 24. 5 | 25. 8 |
| 26. 3 | 27. 6 | 28. 4 | 29. 9 | 30. 5 |
| 31. 7 | 32. 3 | 33. 8 | 34. 7 | 35. 7 |

| | | | | |
|-------|-------|-------|-------|-------|
| 36. 6 | 37. 7 | 38. 8 | 39. 6 | 40. 6 |
| 41. 9 | 42. 6 | 43. 5 | 44. 4 | 45. 9 |
| 46. 2 | 47. 8 | 48. 3 | 49. 5 | 50. 4 |

Exercise 2.2

| | | | | |
|------------|------------|-----------|-----------|------------|
| 1. 3 r3 | 2. 2 r6 | 3. 4 r4 | 4. 5 r2 | 5. 7 r1 |
| 6. 8 r2 | 7. 12 r3 | 8. 9 r1 | 9. 15 r3 | 10. 19 r1 |
| 11. 13 r2 | 12. 14 r3 | 13. 10 r1 | 14. 10 r2 | 15. 54 r2 |
| 16. 22 r2 | 17. 25 r2 | 18. 18 r4 | 19. 31 r7 | 20. 82 r5 |
| 21. 75 | 22. 91 | 23. 58 r2 | 24. 24 r3 | 25. 431 r2 |
| 26. 862 r1 | 27. 581 r1 | 28. 481 | 29. 542 | 30. 991 r3 |

31. Jenny can drive 78 kilometres in one hour.

Exercise 2.3

| | Estimate | Actual | | | Estimate | Actual |
|-----|----------|----------|--|-----|----------|----------|
| 1. | 300 | 302 | | 2. | 100 | 110 |
| 3. | 200 | 204 r1 | | 4. | 300 | 307 r1 |
| 5. | 200 | 208 r2 | | 6. | 100 | 108 r5 |
| 7. | 500 | 520 | | 8. | 700 | 700 r6 |
| 9. | 600 | 604 | | 10. | 1000 | 1 305 r3 |
| 11. | 1 000 | 1 404 r5 | | 12. | 600 | 609 r2 |
| 13. | 2 000 | 2 002 | | 14. | 600 | 640 r2 |
| 15. | 700 | 704 r4 | | 16. | 3 000 | 3 020 |
| 17. | 800 | 807 r7 | | 18. | 7 000 | 7 402 |
| 19. | 9 000 | 9 090 r4 | | 20. | 4 000 | 4 030 r5 |

Exercise 2.4

| | Estimate | Actual | | | | Estimate | Actual |
|-----|----------|----------|--|--|-----|----------|--------|
| 1. | 8 | 6 | | | 2. | 4 | 5 |
| 3. | 5 | 5 r9 | | | 4. | 30 | 28 |
| 5. | 20 | 17 | | | 6. | 30 | 23 r8 |
| 7. | 10 | 13 | | | 8. | 30 | 25 r1 |
| 9. | 40 | 32 | | | 10. | 40 | 43 |
| 11. | 10 | 9 r5 | | | 12. | 6 | 6 |
| 13. | 10 | 9 r55 | | | 14. | 7 | 7 r9 |
| 15. | 20 | 14 r38 | | | 16. | 7 | 6 43 |
| 17. | 40 | 32 r18 | | | 18. | 10 | 10 r29 |
| 19. | 40 | 43 r4 | | | 20. | 60 | 66 r30 |
| 21. | 90 | 80 r6 | | | 22. | 80 | 74 r22 |
| 23. | 60 | 55 r39 | | | 24. | 50 | 47 r40 |
| 25. | 50 | 48 r13 | | | 26. | 70 | 75 r6 |
| 27. | 400 | 471 r5 | | | 28. | 200 | 261 r2 |
| 29. | 1 000 | 1163 r46 | | | 30. | 5 000 | 4553 |

31. Jenna will pay \$315 each month for 24 months.

Exercise 2.5

1. Chris made \$1 113 in 3 weeks.
2. Each co-worker will get \$3 774.
3. Andrew will earn \$2 432.
4. Xu's hourly wage is \$18.
5. There are 17 040 mL in 48 cans.
6. There would be 1 248 envelopes.
7. The sales man traveled 415 kilometres each day.
8. Each person will get 14 minutes to speak. There will be 4 minutes left over.
9. The plane will travel 9 380 km.
10. Jeremy walked 31 kilometres each day.

Exercise 2.6

1. Mary will raise \$168.
2. The students will pay \$2 000 each.
3. The balcony will have 20 seats in each row.
4. Each child will get \$274.
5. Each couple will pay \$95.
6. The account balance for June was \$ 1 197.
